PROJECTS

Movie Flix

Project Description: Movie Flix is a web application about movie information.

- Uses React, Redux and Bootstrap for the frontend.
- MongoDB, Node.js and Express are used to create the movie database.
- Users can create an account which uses OAuth to verify their identity.
- Users can update their information, add their favorite movies.
- The app uses RESTFul API's to manage endpoints of the application.
- Database is hosted on MongoDB Atlas to allow users to store and update their information.

Chat App

Project Description: The Chat App provides users with a chat interface and the ability to share images and their location.

- Uses React Native to build the app.
- Expo.cli was used to develop the app.
- The chat interface and functionality was created using the Gifted Chat library.

Pokedex App

Project Description: Pokedex is a web application about Pokemon information.

- Uses HTML and CSS for the basic structure of the website.
- Bootstrap is used to enhance the frontend.
- Uses Ajax to fetch data from the Pokedex API
- Modals are used to display detailed information about each Pokemon.
